Subjects screened and assessed for inclusion criteria (60 patients, 240 teeth)
Inclusion Criteria
Age group of 3-6 years
Free of any systemic disease
Cooperative patient
Minimal of two surfaces of caries in the targeted tooth
Written consent obtained from the parent/guardian
32 Patient /120 teeth
Met the inclusion criteria
Randomization
Allocate for Zirconia Crowns
60 teeth
Allocate for Strip Crowns
60 teeth
Base-line evaluation
No loss at 3 months follow up
3-month evaluation
No loss at 6 months follow up
6-month evaluation
No loss at 12 months follow up
12-month evaluation
Evaluation criteria
Proximal contact
Marginal integrity
Occlusion
Secondary caries
Gingival health
Plaque index
Restoration failure
Clinical outcomes of 32 patient/ 120 teeth restorations were statistically analyzed
