

Table 2| Troubleshooting Table

Step	Problem	Reason	Solution
26	When the stomach is incised, the gastric contents leak out from the inside	Feed remains in the stomach	On the day before surgery, do not give solid feed, but rather give easily digestible feed such as liquid feed
38	Vomiting during immunosuppressant administration period	<ul style="list-style-type: none"> ● Physical stimulation of the drug into the stomach ● MMF dose may be high 	<ul style="list-style-type: none"> ● Administer after performing enteral feeding ● Administer after warming the liquid drug to approximately 50°C ● Slow down the administration speed of the liquid drug ● Decrease dose of MMF
38	Pus accumulates near the subcutaneous opening of gastrostomy tube	Disinfection is insufficient	Disinfect with povidone-iodine
