

Sepsis Awareness for Education: SAfE study

Lausanne University Hospital

Definitions:

- 13% (28.4%, 5.9% and 6.8%) define sepsis according to sepsis 3 consensus definitions.

- 24% identify qSOFA as bedside tool.

- 6% can compute qSOFA

Management:

In sepsis scenario
- Administration of fluid resuscitation + antibiotics
76% within 1h
18.2% within 3h

Factors associated with sepsis awareness

- Recent training correlates with awareness regarding definitions, SoFA score and qSOFA computation

Supervised survey
91.8%
response rate

Significant deficiencies in sepsis awareness at institutional level, in all professions and departments
Our study makes a strong case
sepsis-specific for continuing education
