B. N=6

Supplementary Figure 1. Threshold effects on SCRIBE Arrays that vary in size.
Supplementary Figure 1. Threshold effects on SCRIBE Arrays that vary in size. A plot of the percent of active rows (in grey) and active columns in an $nxn$ array with thresholds varied from $t=0$ to 0.9 and $n=3,5,6$ and 7. Connections between $t$ are set to zero. A 100 cycles of self-calibration were performed.
