Reporting Summary

Nature Portfolio wishes to improve the reproducibility of the work that we publish. This form provides structure for consistency and transparency in reporting. For further information on Nature Portfolio policies, see our Editorial Policies and the Editorial Policy Checklist.

Statistics

For all statistical analyses, confirm that the following items are present in the figure legend, table legend, main text, or Methods section.

n/a: Confirmed

☑ The exact sample size (n) for each experimental group/condition, given as a discrete number and unit of measurement

☑ A statement on whether measurements were taken from distinct samples or whether the same sample was measured repeatedly

☐ The statistical test(s) used AND whether they are one- or two-sided

Only common tests should be described solely by name; describe more complex techniques in the Methods section.

☐ A description of all covariates tested

☐ A description of any assumptions or corrections, such as tests of normality and adjustment for multiple comparisons

☐ A full description of the statistical parameters including central tendency (e.g. means) or other basic estimates (e.g. regression coefficient) AND variation (e.g. standard deviation) or associated estimates of uncertainty (e.g. confidence intervals)

☐ For null hypothesis testing, the test statistic (e.g. F, t, r) with confidence intervals, effect sizes, degrees of freedom and P value noted

Give P values as exact values whenever suitable.

☐ For Bayesian analysis, information on the choice of priors and Markov chain Monte Carlo settings

☐ For hierarchical and complex designs, identification of the appropriate level for tests and full reporting of outcomes

☐ Estimates of effect sizes (e.g. Cohen’s d, Pearson’s r), indicating how they were calculated

Our web collection on statistics for biologists contains articles on many of the points above.

Software and code

Policy information about availability of computer code

Data collection: We did not use any collection tools to collect the data. In this project, all the data are publicly available.

Data analysis: We used Python and Pytorch to analyze the data.

For manuscripts utilizing custom algorithms or software that are central to the research but not yet described in published literature, software must be made available to editors and reviewers. We strongly encourage code deposition in a community repository (e.g. GitHub). See the Nature Portfolio guidelines for submitting code & software for further information.

Data

Policy information about availability of data

All manuscripts must include a data availability statement. This statement should provide the following information, where applicable:

- Accession codes, unique identifiers, or web links for publicly available datasets
- A description of any restrictions on data availability
- For clinical datasets or third party data, please ensure that the statement adheres to our policy

All the datasets used in this project are published datasets. Upon the publication of this manuscript, a merged dataset combining all the datasets mentioned in the paper will be made available.
Human research participants

Policy information about studies involving human research participants and Sex and Gender in Research.

Note that full information on the approval of the study protocol must also be provided in the manuscript.

Field-specific reporting

Please select the one below that is the best fit for your research. If you are not sure, read the appropriate sections before making your selection.

☐ Life sciences  ☐ Behavioural & social sciences  ☒ Ecological, evolutionary & environmental sciences

For a reference copy of the document with all sections, see nature.com/documents/nr-reporting-summary-list.pdf

Ecological, evolutionary & environmental sciences study design

All studies must disclose on these points even when the disclosure is negative.

<table>
<thead>
<tr>
<th>Study description</th>
<th>In this manuscript, we introduce the application of an audio-language model, CLAP, to identify and detect multiple animal groups from bioacoustics audio recordings in a zero-shot transfer protocol.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Research sample</td>
<td>The bioacoustics benchmarks used in this manuscript are for birds, frogs, whales, and gunshots. No species level information is used in the experiments.</td>
</tr>
<tr>
<td>Sampling strategy</td>
<td>All the data sampling and splitting strategy follow the default settings from the original papers where the benchmarks are published.</td>
</tr>
<tr>
<td>Data collection</td>
<td>All the data used in this manuscript are publicly available online. We didn't collect the data ourselves.</td>
</tr>
<tr>
<td>Timing and spatial scale</td>
<td>All the data used in this manuscript are publicly available online. We didn't collect the data ourselves.</td>
</tr>
<tr>
<td>Data exclusions</td>
<td>Some of the RfCx noise data were excluded as the experiments on RfCx are about bird v.s., frogs.</td>
</tr>
<tr>
<td>Reproducibility</td>
<td>Since CLAP is a pretrained model and there are no fine-tuning and dedicated training under zero-shot transfer, all the results are reproducible once the code for CLAP inference for bioacoustics are published.</td>
</tr>
<tr>
<td>Randomization</td>
<td>All the data splitting follow the default settings from the original papers where the benchmarks are published.</td>
</tr>
<tr>
<td>Blinding</td>
<td>There is no blinding involved in this study as all the data are publicly available and we only follow the default settings from the original papers where the data are published.</td>
</tr>
</tbody>
</table>

Did the study involve field work?  ☐ Yes  ☒ No

Reporting for specific materials, systems and methods

We require information from authors about some types of materials, experimental systems and methods used in many studies. Here, indicate whether each material, system or method listed is relevant to your study. If you are not sure if a list item applies to your research, read the appropriate section before selecting a response.
Materials & experimental systems

n/a Involved in the study
- Antibodies
- Eukaryotic cell lines
- Palaeontology and archaeology
- Animals and other organisms
- Clinical data
- Dual use research of concern

Methods

n/a Involved in the study
- ChiP-seq
- Flow cytometry
- MRI-based neuroimaging

Animals and other research organisms
