

Monitoring disease and antibiotic treatment in the skin microbiota of farmed seabass fingerlings

Microbial Ecology

Daniela Rosado, Marcos Pérez-Losada, Ricardo Severino, Raquel Xavier

Online Source 3: Microbial structure of the skin microbiota of seabass *Dicentrarchus labrax* fingerlings based on the UniFrac weighted and Bray-Curtis distances (Ward method). Each line in the dendrogram represent a microbiota sample. All graphs are colored by state (Healthy = green; Diseased = orange; Treatment = yellow; Recovery = purple).
