

## Supplementary Figure S1

### Supplementary Figure S1 Associations between serum sCD226 levels and conventional biomarkers

Correlations between serum sCD226 levels and anti-dsDNA antibody (Ab) titers (A), serum C3 (B), and C4 (C) levels in SLE patients. Each data point represents a single subject. Correlation analyses were done using Spearman's rank correlation. sCD226: soluble CD226; SLE: systemic lupus erythematosus.
