

The MarR family regulator OsbR controls oxidative stress response, anaerobic nitrate respiration, and biofilm formation in *Chromobacterium violaceum*

Additional File 3. Figure S3-S5.

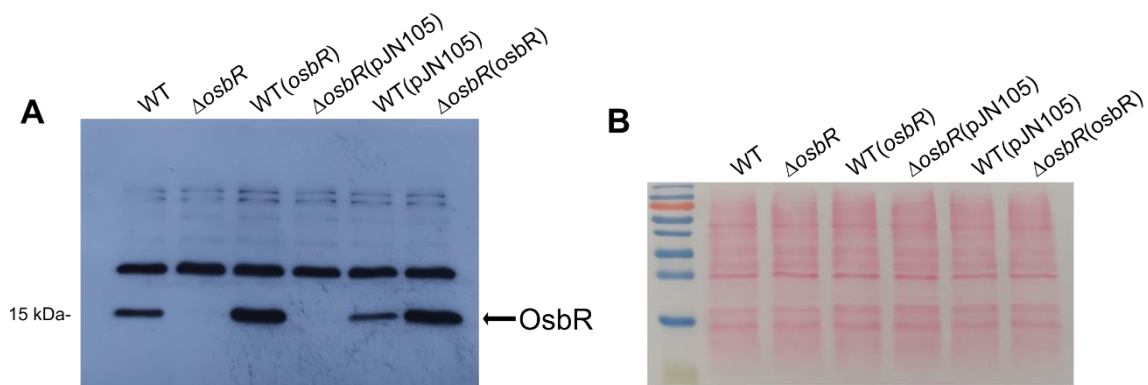

Fig. S3 Uncropped blot. a, b. Full-length blot (a) and Ponceau-stained membrane (b) related to the Fig. 1a.

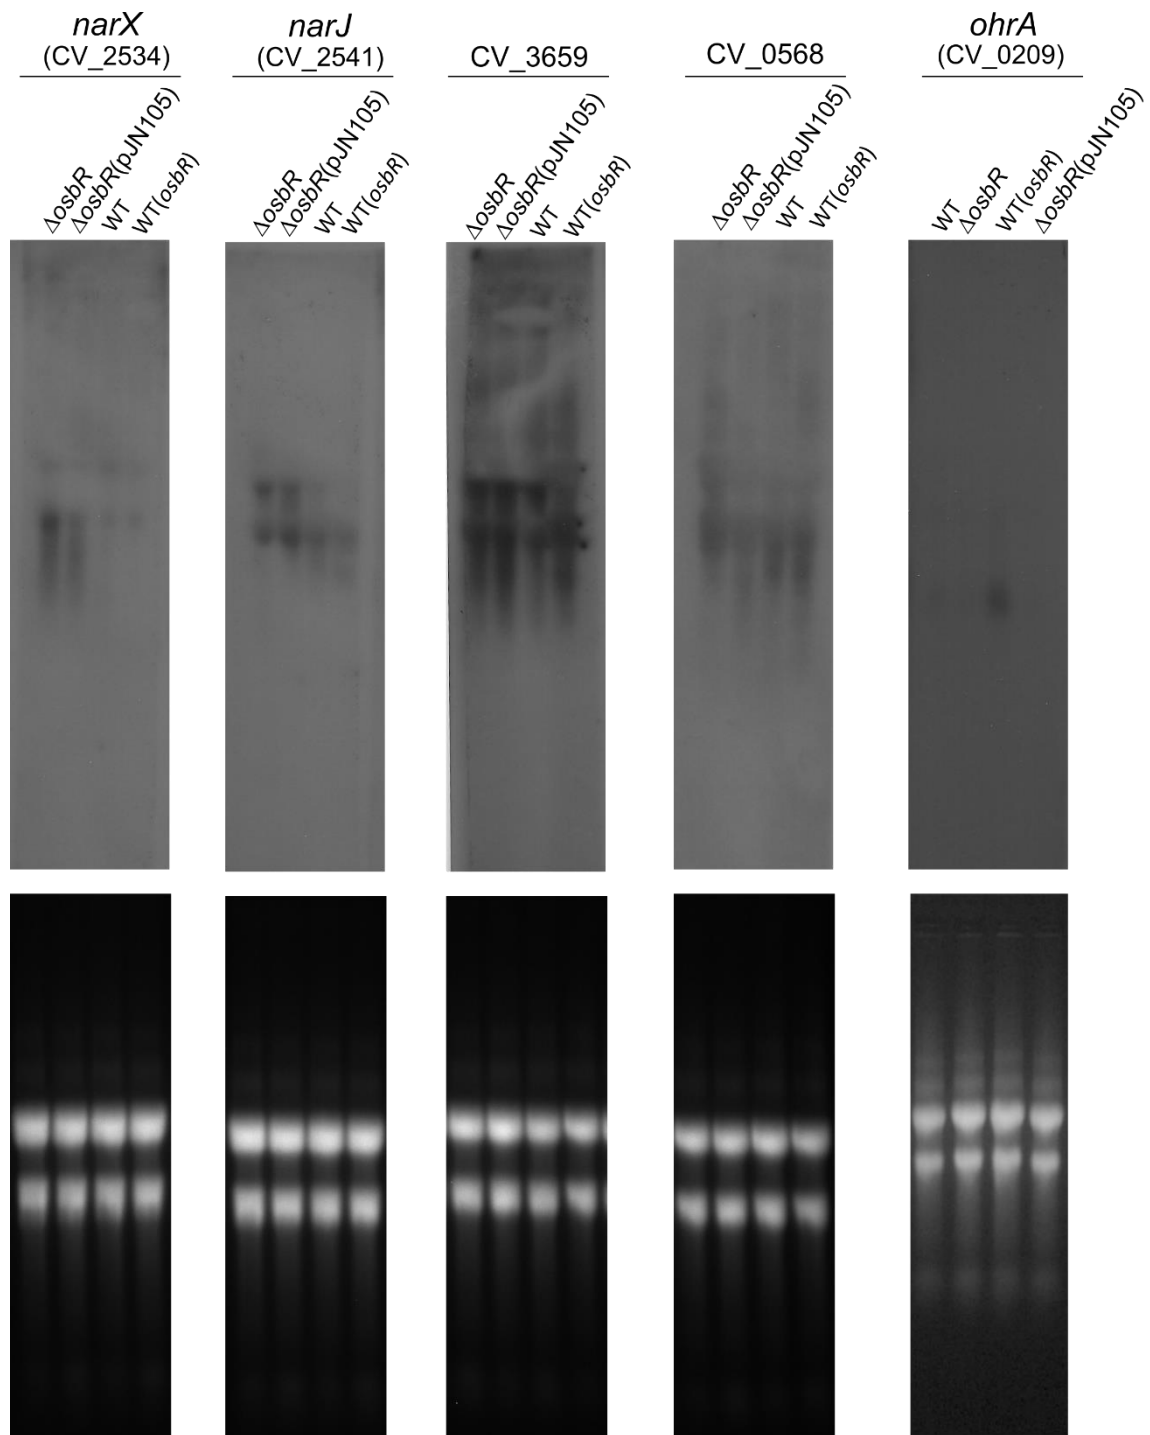

Fig. S4 Uncropped Northern blot. Above, autoradiography of the indicated genes.

Below, gel of respective samples showing RNA loading. Related to the Fig. 3.

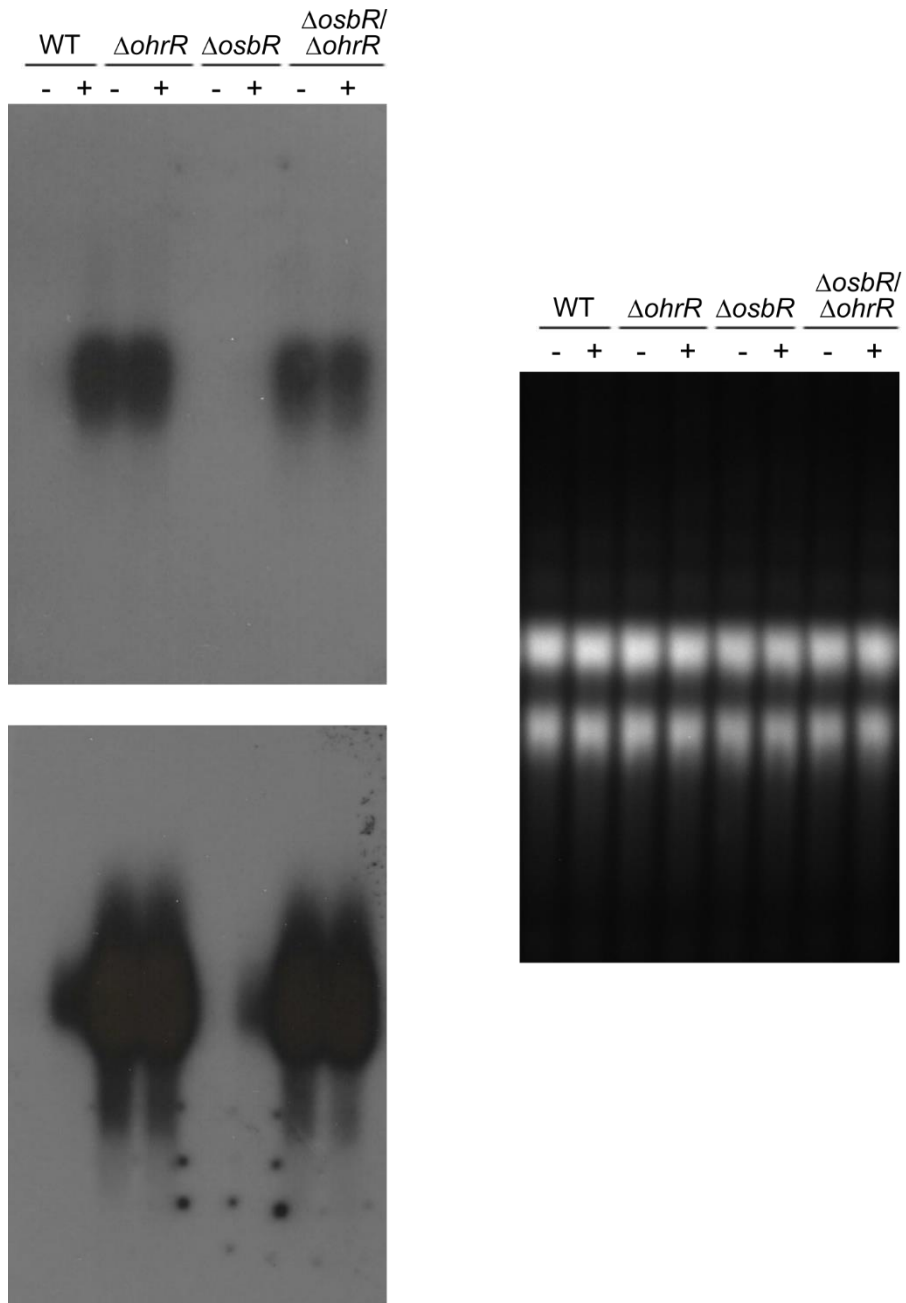

Fig. S5 Uncropped Northern blot. Left, autoradiography less (above) or more (below) exposed for *ohrA*. Right, gel of respective samples showing RNA loading. Related to the Fig. 6a.
