

## 1 **Methods**

### 2 *Baseline Clinical characteristics*

#### 3 Dual-energy X-ray absorptiometry (DXA)

4 The whole-body composition was estimated by using DXA (Lunar Prodigy Bone  
5 Densitometers, GE Healthcare, USA), with a full-body examination. Fat and lean mass  
6 were expressed in absolute values (kg), and percentage values (%) described by the DXA  
7 scan manufactured. The participants were not instructed on food intake or nutritional  
8 prescription.

9

#### 10 Echocardiography

11 The echocardiographic measurements were performed according to the  
12 recommendations of the American Society of Echocardiography[1]. Classic parameters  
13 representing cardiac structure (left atrial enlargement and/or left ventricular hypertrophy)  
14 and function (ejection fraction calculation followed Simpson method) were evaluated[2].  
15 All patients were evaluated by the same cardiologist using an ultrasound (Vivid S6, GE  
16 Healthcare, Tirat Carmel/ Haifa, Israel) and probe (matricial 4V;setorial 3Sc) with both  
17 GE 3Sc-RS Probe (Sector) and the GE 4V-D Probe (collector). Resting supine position  
18 included the following measurements: left ventricular ejection fraction (LVEF, %), left  
19 atrial volume index (LAVI, ml/m<sup>2</sup>); left ventricular mass index (LVMI, g/m<sup>2</sup>); pulsed  
20 wave tissue Doppler imaging was used for early diastolic velocity (e') at the septal  
21 annulus. The E/e's ratio was measured as an indicator for LV filling pressures.

22

#### 23 Spirometry

24 Lung volumes and capacities were assessed by forced spirometry, using s  
25 calibrated spirometer (MicroLab CareFusion® MK8) through a proper Spirometry PC  
26 Software. The spirometry evaluations followed the American Thoracic Society/European  
27 Respiratory Society's recommendations, 2005[3]. The predictions were calculated  
28 according to the equations for the Brazilian, population according to Pereira et al.,  
29 2007[4]. Variables considered were forced expiratory volume in the first second (FVE<sub>1</sub>,  
30 L/s), forced vital capacity (FVC, L/s), ratio FVE<sub>1</sub> by FVC (FVE<sub>1</sub>/FVC, L/s), and all  
31 predicted value (%).

32

33

34            Cardiopulmonary exercise test

35            Functional exercise capacity assessed utilizing a maximal incremental  
36 cardiopulmonary exercise test of an electromagnetic bicycle (Corival, LODE BV Medical  
37 Technology Groningen - Netherlands) under cardiologist supervision. The gas analyzer  
38 (CPET, Cosmed, Rome, Italy) were following the breath-by-breath method, evaluating  
39 the variables determined by both V-Slope and ventilatory equivalents method[5], thereby  
40 assessing peak oxygen uptake capacity (peak  $\dot{V}O_2$ ) and peak power using a 1-min work  
41 stage protocol (starting workload of 20W and incremental workload of 10 to 15W).  
42 Oxygen uptake and heart rate (12-lead electrocardiogram) measurements were performed  
43 continuously. All patients cycled until volitional exhaustion, when patients were no  
44 longer able to maintain a cycling frequency of 55 rpm higher. Peak exercise effort was  
45 confirmed when respiratory gas exchange ratio (RER) was  $\geq 1.10$ , with dyspnea or leg or  
46 general fatigue.

47            The exercise test occurred at least 2-3h following the last meal, and the patients  
48 could not exercise 24h before the test. Primarily, patients adopted a rest period on the  
49 ergometer of at least 5min, until a steady-state respiratory had been established. At the  
50 end of the exercise, the state of recovery was observed for 2min. All individuals  
51 performed the exercise test on a symptom-limited ramp by increasing the standard ramp's  
52 work rate. After a warm-up period of 2min at 20W, an increase in the work rate at a slope  
53 of 10-15W/min was stated (recommendation for HF patients)[6]. Individuals were asked  
54 about their perception of ventilatory effort and muscular fatigue every 2 minutes,  
55 according to the Borg scale (6 to 20)[7].

82

83

84 **STROBE Statement - checklist of items that should be included in reports of**  
 85 **observational studies**  
 86

	<b>Item No</b>	<b>Recommendation</b>
<b>Title and abstract</b>	1	(a) Indicate the study's design with a commonly used term in the title or the abstract ( <b>page 1</b> ) (b) Provide in the abstract an informative and balanced summary of what was done and what was found ( <b>page 1</b> )
<b>Introduction</b>		
Background/rationale	2	Explain the scientific background and rationale for the investigation being reported ( <b>pages 2 and 3</b> )
Objectives	3	State specific objectives, including any prespecified hypotheses ( <b>page 3</b> )
<b>Methods</b>		
Study design	4	Present key elements of study design early in the paper ( <b>page 3</b> )
Setting	5	Describe the setting, locations, and relevant dates, including periods of recruitment, exposure, follow-up, and data collection ( <b>page 3</b> )
Participants	6	(a) <i>Cohort study</i> —Give the eligibility criteria, and the sources and methods of selection of participants. Describe methods of follow-up <i>Case-control study</i> —Give the eligibility criteria, and the sources and methods of case ascertainment and control selection. Give the rationale for the choice of cases and controls <i>Cross-sectional study</i> —Give the eligibility criteria, and the sources and methods of selection of participants (b) <i>Cohort study</i> —For matched studies, give matching criteria and number of exposed and unexposed <i>Case-control study</i> —For matched studies, give matching criteria and the number of controls per case ( <b>page 3 and 4</b> )
Variables	7	Clearly define all outcomes, exposures, predictors, potential confounders, and effect modifiers. Give diagnostic criteria, if applicable ( <b>page 3</b> )
Data sources/ measurement	8*	For each variable of interest, give sources of data and details of methods of assessment (measurement). Describe comparability of assessment methods if there is more than one group ( <b>pages 4, 5 and 6</b> )
Bias	9	Describe any efforts to address potential sources of bias ( <b>page 5</b> )
Study size	10	Explain how the study size was arrived at ( <b>page 6</b> )
Quantitative variables	11	Explain how quantitative variables were handled in the analyses. If applicable, describe which groupings were chosen and why ( <b>page 6</b> )
Statistical methods	12	(a) Describe all statistical methods, including those used to control for confounding ( <b>page 6</b> ) (b) Describe any methods used to examine subgroups and interactions ( <b>page 6</b> ) (c) Explain how missing data were addressed ( <b>page 5</b> ) (d) <i>Cohort study</i> —If applicable, explain how loss to follow-up was addressed <i>Case-control study</i> —If applicable, explain how matching of cases and controls was addressed <i>Cross-sectional study</i> —If applicable, describe analytical methods taking account of sampling strategy ( <b>pages 6 and 7</b> ) (e) Describe any sensitivity analyses

<b>Results</b>		
Participants	13*	(a) Report numbers of individuals at each stage of study—eg numbers potentially eligible, examined for eligibility, confirmed eligible, included in the study, completing follow-up, and analysed ( <b>pages 7, 8, 9, 10, 11, 12, 13 and 14</b> ) (b) Give reasons for non-participation at each stage (c) Consider use of a flow diagram
Descriptive data	14*	(a) Give characteristics of study participants (eg demographic, clinical, social) and information on exposures and potential confounders ( <b>pages 7 and 8</b> ) (b) Indicate number of participants with missing data for each variable of interest ( <b>pages 7, 8, 9, 10, 11, 12, 13 and 14</b> ) (c) <i>Cohort study</i> —Summarise follow-up time (eg, average and total amount)
Outcome data	15*	<i>Cohort study</i> —Report numbers of outcome events or summary measures over time <i>Case-control study</i> —Report numbers in each exposure category, or summary measures of exposure <i>Cross-sectional study</i> —Report numbers of outcome events or summary measures ( <b>pages 7, 8, 9, 10, 11, 12, 13 and 14</b> )
Main results	16	(a) Give unadjusted estimates and, if applicable, confounder-adjusted estimates and their precision (eg, 95% confidence interval). Make clear which confounders were adjusted for and why they were included ( <b>pages 10, 12 and 14</b> ) (b) Report category boundaries when continuous variables were categorized (c) If relevant, consider translating estimates of relative risk into absolute risk for a meaningful time period
Other analyses	17	Report other analyses done—eg analyses of subgroups and interactions, and sensitivity analyses ( <b>pages 7, 8, 9, 10, 11, 12, 13 and 14</b> )
<b>Discussion</b>		
Key results	18	Summarise key results with reference to study objectives ( <b>page 15</b> )
Limitations	19	Discuss limitations of the study, taking into account sources of potential bias or imprecision. Discuss both direction and magnitude of any potential bias ( <b>page 16</b> )
Interpretation	20	Give a cautious overall interpretation of results considering objectives, limitations, multiplicity of analyses, results from similar studies, and other relevant evidence ( <b>pages 15 and 16</b> )
Generalisability	21	Discuss the generalisability (external validity) of the study results ( <b>page 16</b> )
<b>Other information</b>		
Funding	22	Give the source of funding and the role of the funders for the present study and, if applicable, for the original study on which the present article is based ( <b>title page</b> )

88

89 \*Give information separately for cases and controls in case-control studies and, if applicable, for exposed  
90 and unexposed groups in cohort and cross-sectional studies.

91

92 **Note:** An Explanation and Elaboration article discusses each checklist item and gives methodological  
93 background and published examples of transparent reporting. The STROBE checklist is best used in  
94 conjunction with this article (freely available on the Web sites of PLoS Medicine at  
95 <http://www.plosmedicine.org/>, Annals of Internal Medicine at <http://www.annals.org/>, and Epidemiology  
96 at <http://www.epidem.com/>). Information on the STROBE Initiative is available at [www.strobe-](http://www.strobe-statement.org)  
97 [statement.org](http://www.strobe-statement.org).
