

Figure S2 RPR changes after TBI and anti-inflammatory treatments in the mice model. (a) Changes on RPR of TBI mice at 1 and 3 DPI. (b) RDW and Plt count of TBI mice at 1 and 3 DPI. (c-e) The expression levels of inflammatory mediators TNF- α , IL-1 β and IL-10 in the mice brain of 3 DPI. (f-h) The expression levels of inflammatory mediators TNF- α , IL-1 β and IL-10 in the mice serum of 3 DPI. n = 6/group. Data are presented as mean \pm SD. p1, Control vs TBI; p2, TBI vs TBI+SC75741; p3, TBI vs TBI+MCC950. ***p < 0.001, **p < 0.01, *p < 0.05. DPI: days post-injury; Plt: platelet; RDW: red cell distribution width; RPR: RDW - Plt count ratio; TBI: traumatic brain injury
